
BARCODE AND LABELING SOFTWARE

BarTender

BarTender software enables organizations around the world to improve safety, security, efficiency, and compliance. Solving your most complex needs for labeling, barcoding and more, with solutions designed to grow with your business. Quickly and easily make barcodes for a variety of applications.

WHAT IS IT/ WHAT IT DOES?

BarTender is software used to generate unique product barcodes and print barcode labels. It allows projects to print individual barcodes for objects such as beneficiary cash vouchers, beneficiary IDs, households and more. The barcodes can be designed in different ways and print barcodes for individual project use. BarTender also has 400 preformatted barcode components for easy use. Additionally, the software provides an online monitoring system to organize system use and provide document control. The printing information can be easily integrated into other ICT4D systems. Scanning barcodes in the field can be done by installing a barcode reader on your mobile device. Barcodes are then scanned using the camera on the mobile device, or a Bluetooth scanner that communicates with your mobile device. For large scale use, Bluetooth scanners will speed up scanning compared to a mobile device camera.

HOW WE USE IT

Barcodes have been used for vouchers, beneficiaries/household/group identification, warehouse and goods management, and facility management. Barcodes and unique numbers can help merge datasets, eliminate the need to repeatedly collect personally identifiable information in various project activities, as well as protect beneficiary identity.

HOW MUCH DOES IT COST?

BarTender is sold exclusively through a worldwide network of resellers and integrators. If you do not have a BarTender reseller, just contact BarTender and a representative will respond to you.

Please note, there is a [free version](#) available; however, you are unable to connect to databases and would need to manually input the data.

For a detailed listing of the packages BarTender has available for purchase, please consult this [link](#).
